Cables are the company's main focus and account for our largest production facilities.

Since our aim is to ensure complete customer satisfaction, cables and transmission lines are manufactured with the most modern equipment to meet the very latest quality standards.

The ISO 9001 certificate, awarded in 1993, gives our customers a guarantee of quality control which strictly complies with the most stringent standards in this field. The quality of our products is the result of a comprehensive supervisory system which covers all stages of the production process, right through from the initial design stage to customer service. As a direct result of our dynamic and forward looking company management and entrepreneurial spirit, our long established concern for quality is at the very heart of product development and production control.

The company's workforce is organised into highly motivated and competent teams which strive to produce the highest quality products which meet our clientele's specific requirements. Their extensive experience, spirit of innovation and willingness to constantly strive for improved quality were essential in achieving the high standards required for the awarding of the ISO 9001 certificate.

Kabelwerk Eupen has a reputation for its advanced technology and for the total reliability of its products. Our satisfied customers on all five continents prove this on a daily basis.

Our ability to understand customer requirements and to meet and exceed expectations is a major reason why we have become an indispensable partner to so many world famous companies working in the fields of telecommunications and electrical engineering.
