ECC- Eupen Cable Clamps for RF cables

FEATURES

- High durability given by non-corrosive metal components of V2A stainless steel and calibrated saddles from ultraviolet and aging-resistant polyamide.
- Installable at "C"-profile rails common in radio systems as well as flat sections to a maximum of 25 mm thickness and tubes up to a diameter of 25 mm (according to clamp type).
- Easy handling; the cable clamps (single type) consist of merely two elements.
- Inlet design with crotchet on both sides to retain the saddles in the clamp while fixing the cable.
- Protection of the cable against a possible harm through the tensioning screw is ensured since the tensioning screw is combined firmly with the polyamide shell.
- Test installations with fixing torques of maximum 2 Nm showed secure hold without deformation of the cable and change of the transmission characteristics (TDR measurements).

SUITABLE PROFILE TYPES

- Standard C-Profile
- Flat sections
- Pipes
- Right angle
