Hangers

The different hanger types are designed for quick and easy installation. The hangers provide a dependable solution for supporting single runs of coaxial cable in wireless systems. To install, the installer mounts the hanger to the tower member, inserts the coaxial cable and locks it safely. Corrosion resistant stainless steel construction ensures long term integrity in environmental extremes.

CLIP HANGERS

The Clip Hangers are designed for easy installation. The clip-type locking mechanism is easily latched to hold the coax firmly in place. The Clip Hangers are slotted to accept round member adapters or banding strap for mounting to round tower members.

•Application :	Coax Support
•Mounts to :	7/16" (11.1 mm) pre-punched hole
•Design :	Clip-on single run hanger
•Material :	Stainless steel
•Feature :	Easy-to-install solution
